[What are Masternodes? Complete Beginner's Guide](#)

Blockchain is best described as a decentralised technology (or distributed digital ledger) where transactions are anonymously recorded across many different users. It is a record of events, which once entered cannot be altered or deleted. Why is it important? The blockchain has the ability to change the way data is stored, shared and managed.

[How to start learning blockchain development from a ...](#)

A blockchain is a distributed database, meaning that the storage devices for the database are not all connected to a common processor. It maintains a growing list of ordered records, called blocks.
