Manual Design of RC Building : Part 6| Design of Footing| Civil Engineering

Civil Engineering, like many other engineering disciplines- requires specialization. Civil engineers typically specialize in site and infrastructure design, whereas architects specialize in, well, architecture. Building design

requires unique experience and professional certification from that of civil engineers.

Structural Building Design: Wind and Flood Loads is based upon the author's extensive experience in South Florida as a structural designer, building code official, and an expert witness. He has more than 30 years of engineering experience in the United States, Dubai, and India.

Civil Engineering | WBDG - Whole Building Design Guide

In any case, effective structural design requires civil engineers to ensure that a building can absorb applications of external force, maintaining its own equilibrium. Just like a tree branch that doesn't bend will break in the wind, a structure that can't absorb external forces is vulnerable to damage and instability.

Building Construction and Design Books - Civil Engineering

Building Construction & Design Civil engineers and architects complement each other's' work. An architect takes care of the design and shape of a building whereas a civil engineer takes care of the technical nitty-gritty like the strength of the building. Architecture is art; civil engineering is more about physics
