Novel Sensors And Sensing - s2.kora.com

Unlike typical pyroelectric human presence sensors that rely on motion detection, the D6T thermal sensor is able to detect the presence of stationary humans by detecting body heat, and can therefore be used to switch off unnecessary lighting, air conditioning, etc automatically when people are not present (regardless of whether they move or not).

Novel Sensors And Sensing

Novel sensor development The applications for sensing technologies are multiplying. On the one hand, there is the need to develop highly sophisticated, highly sensitive sensors that can detect at very low levels. These are usual, for example, in the medical arena.

Conversely, the first generation of SWIR sensors based on the new technology shrinks the pitch to 5 μm , enabling four times the number of pixels in the same space to create an SXGA (1296 x 1032) resolution SWIR sensor on a 1/2-type (8.2mm) footprint and a VGA (656 x 520) resolution sensor with a 1/4-type (4.1mm) footprint.

A novel electrochemical sensor based on 2D CuTCPP ...

Humans spend approximately 90% of their time indoors, for example at the office. Consequently, it is essential to equip the office environment with a high quality lighting control system. Unfortunately, current systems are not up to this task yet. Too often, they tend to annoy the user, occasionally even leading to sabotaged systems—for instance, by unplugging sensor devices. The main issue ...

The sensing performances of sensors were measured with a Novocontrol Concept 80 broadband dielectric spectrometer at an AC 0.5 V voltage in the frequency range from 100 Hz to 1 M Hz. The relative humidity generation sources were gained by six airtight charms of saturated salt solution (LiCl, MgCl₂, Mg(NO₃)₂, NaCl, KCl and KNO₃) at a temperature 25 °C respectively.
