predicted requires a parameterization scheme based on: •
reasonable physical representations (for example, radiation), or
• statistical representations (for example, inferring cloudiness
from relative humidity) • The scheme must derive information
about the processes from the variables in the forecast equations
using a set of assumptions.

Parameterization in a weather or climate model in the context of

Bookmark File PDF Parameterization Schemes Keys To Understanding Numerical Weather Prediction Models

numerical weather prediction is a method of replacing processes that are too small-scale or complex to be physically represented in the model by a simplified process. This can be contrasted with other processes—e.g., large-scale flow of the atmosphere—that are explicitly resolved within the models.
