not. Phase is not synonymous with compound. Phases need not be chemically distinct: a glass of ice water has two distinct phases: water and ice.

*Principles of Environmental Geochemistry | SpringerLink*

Many geochemists focus on natural systems with less emphasis on the human impact on those systems. Environmental chemists frequently approach their subject with less consideration of the historical record than geoscientists. The field of environmental geochemistry combines these approaches to address questions about the natural environment and anthropogenic effects on it.

*W. M. White Geochemistry Chapter 3: Solutions*

Environmental geochemistry is concerned with the sources, distribution and interactions of chemical elements in the rock-soil-water-air-plant- animal-human systems. The primary source of elements are igneous rocks of which silicates and aluminosilicates are the dominant compounds.
