~~Comparing 6 Techniques To Do Data Driven Programming — PhUSE~~

Thinking of joining PHUSE? Already a member but not sure how you can benefit? PHUSE is an expanding, global society with a global membership of clinical data scientists. It requires a large pool of resources to help with its running, and so there are many opportunities for members to become involved.

~~SAS macro validation criteria — PHUSE Wiki~~

ABSTRACT. During the development and maintenance (life-cycle) process of SAS® macros, especially while they are already used for production purposes, it is very much recommended to keep a history of changes, additions and bug fixes along with the macro version number.

~~Good Programming Practice in Macro Development — PHUSE Wiki~~

From PHUSE Wiki Jump to: navigation , search The Coder's Corner section is dedicated to brief presentations of real-life code, programming tips, efficiency techniques, undocumented features, useful algorithms and macros and other creative uses of software.

~~Sas Macro Count Phuse Wiki~~

The macro %_COUNT_ is called from within a SAS data step involving the variables from the dataset being read. Below some examples with their explanation are presented; the SPSS-equivalent code is printed in italics. The example starts with some example data. Note that variable names and values within lists are separated by commas and/or spaces.

~~phuse.org/phuse-scripts — GitHub~~

The SAS® macro-function %VARLIST(), a generic utility function that can retrieve lists of variables from one or more datasets, and process them in various ways in order to generate code fragments, was presented at the PhUSE 2015 Annual

~~Sas macro %count — PHUSE Wiki~~

Developing and using general SAS® macros may reduce development time of dedicated program code, errors and frustration. It may increase the quality and the quantity of the resulting output. However, especially in pharmaceutical research all generated SAS code has to be validated, including newly developed macros.

~~A macro to re-size character variable length~~

Standard Analyses & Code Sharing. Working Group & Project Scope. Working Group Leads . Mary Nilsson. Hanming Tu. The development and implementation of industry standards provides a great opportunity to develop standard reporting across industry and to support the needs of the FDA.

~~how to count the frequency of variables ... — Sas Institute~~

Lex Jansen is a SAS employee. The views expressed on this website do not represent the views of SAS. Contact me. 340 papers presented at PHUSE US Connect 2018-2019. PHUSE US Connect 2020.

March 8-11, Orlando, FL. 12355 papers ... Lex Jansen does not warrant, nor does he accept any responsibility or liability for, the accuracy or completeness of ...

~~Solved: Using COUNTW function on macro variables - SAS ...~~

Combining the guideline from CDISC and the recommendations on PhUSE Wiki website, this macro was developed to implement the following principles: • For character variables whose maximum length is not stated in the SDTM IG, variable length is determined by the maximum length found in data.

~~Fun with Functions and Macro Variables in PROC SQL - PhUSE~~

Built-in macro-functions. Macro functions such as %INDEX, %SUBSTR(), or %LOWCASE() compute a result based on specified or default arguments, and return (or resolve to) a value, which is then used inside other user-written macro definitions or in open code such as data step, global statements and procedure calls.

~~Utility Macro Index (SAS) - phuse.org/phuse-scripts-Wiki ...~~

Project Overview. Macros provide an effective way to automate and reuse code in a standard and consistent manner across SAS programs. This ability to reuse code means that the use of GPP is particularly important in macro code and we think that there is a need to develop a consensus and document good programming practices specifically for macro programming.

~~SAS Macro Version Control - PHUSE Wiki~~

util_get_reference_lines.sas - Determine normal range reference lines to include in a plot implemented to do TO DO util_get_var_min_max.sas - Determine the MIN and MAX of a numeric variable implemented to do TO DO util_labels_from_var.sas - Create sequence of macro vars with code and labels from a ...

Welcome to the CSS/PhUSE repository. This site hosts standard scripts for data transformations and analyses across and within a therapeutic area, as well as for exploratory analyses. Our goal is to standardize analyses and code across the industry, and to provide other examples of how our industry can build upon standardized data sets.

~~Standard Analyses Code Sharing - PhUSE~~

These data driven techniques make use of SAS® data steps, SQL procedures, and SAS macro coding. The main idea is to use a SAS data step or SQL procedure to initiate a module and SAS macro programming to drive the module. All techniques discussed in this paper should be able to call a macro based on values in a dataset.

~~Category: Coders Corner - PHUSE Wiki~~

The SQL procedure is a powerful and versatile tool which, when combined with one or more SAS® functions, is able to summarize (or aggregate) data. Besides its ability to aggregate data, PROC SQL can also be used with the SELECT statement's INTO clause to create single-value macro variables and when combined with the SEPARATED BY keyword is able to create an array of values, commonly ...

~~Category: Macro functions - PHUSE Wiki~~

The SAS macro-function %VARLIST (), a generic utility function that can retrieve lists of variables from one or more datasets, and process them in various ways in order to generate code fragments, was first presented at the PhUSE 2015 Annual Conference in Vienna. That paper focused on

generating code for SQL joins of arbitrary complexity.

~~Top 10 uses of macro %varlist in proc SQL, Data Step and ...~~

`%put test` has a word count of `%sysfunc(countw(test))`; In the case of an empty macro variable, `countw` returns a value of 1. I'd like the result to be 0 in this case, which seems like it should be the result, but I'm clearly missing something in the documentation. Is there a way to have this return 0 by using some combination of optional arguments?
